I. W. SCOTT'S 83rd YEAR

HELPING MOTHER NATURE TO BEAUTIFY YOUR HOMES!

With the publication of this catalogue The I. W. Scott Company attains its 83rd year as the Tri-State's largest, oldest and most modern vendor of seed, lawn, garden and nursery supplies. No single catalogue could possibly describe and illustrate our entire stock. This catalogue merely attempts to present those items usually in demand. For 83 years farmers, nurserymen, landscapers and home owners have turned to Scott's for reliable advice and inexpensive quality products. The initials "I. W." preceding our name are most significant because there are two other companies with the same last name. Insist on the dependable products of I. W. SCOTT'S.

The finest lawns in our area have been grown with I. W. Scott's grass seed mixtures especially blended to produce luxurious lawns in Pittsburgh's soil and climate. The most satisfactory vegetable gardens and the most beautiful flower beds have been grown from I. W. Scott's seed and flower bulbs brought to you from the most select growers in the United States, Holland, Belgium, France and wherever else the best seed can be obtained. I. W. Scott's seeds are dependable!

Spring is not too far away . . . This is the time to start planning to beautify your home. . . The new lawn, patching the established lawn, the flower and vegetable garden . . . This is the time to recall last season's Crabgrass and plan to take preventative measures with Pax or Crag Herbicide by destroying the Crabgrass seed before it can germinate . . . Recall, too, last season's weeds and plan to apply Weedone early . . . Stop in and visit with us . . . Discuss your plans and problems with our experienced staff . . . They will help you because our 83 year reputation is based on the philosophy that there is nothing worse than selling you the wrong product or giving you improper advice. You may depend on I. W. Scott's advice and products, without reservation.

Incidentally, many people do not realize that we are no longer located on Liberty Avenue in the Triangle Area. Because that store was far too inadequate to serve our customers properly it was closed on July 1, 1956, and moved to Fourth Avenue and Smithfield Street, opposite the old post office.

Our general offices and warehouse are now located on the North Side of Pittsburgh at 511 East Diamond Street, just below the famous North Side Market. Our telephone switchboard for the downtown store is located on the North Side and, therefore, the downtown store is reached through CEdar 1-6919. This is an attempt to explain the confusion arising from the fact that our downtown store bears a North Side telephone number.

For the convenience of those who prefer to shop on the North Side, we have opened a completely modern garden store in our warehouse located at 511 East Diamond Street just below the North Side Market.

I. W. Scott's Garden Center, located at 1851 Babcock Boulevard just one-half mile from the business center of Millvale, has a complete stock of garden supplies plus the finest nursery stock obtainable anywhere. Evergreens, shrubs, trees, ground cover plants, etc., are displayed in our large nursery yard. Shopping is convenient here because you dress as you like, come any day or Sunday from 9 A.M. to 9 P.M. and park your car in our large parking area.

Drop in to see us and perhaps you will want to adopt our lay-away plan which operates for twelve months each year. . . Use it now for this Spring's tools, equipment and other lawn and garden needs.

HELPING MOTHER NATURE

Earlier, stronger and larger plants result from starting vegetable and flower seeds indoors at this time of the year . . . Keep seeds carefully watered, warm (60 to 70°), and without light for about four weeks until seedlings are up . . . Then expose to full light and temperature of 55 to 65° . . . Before transplanting outdoors, place boxes outside for about a week.

A word (?) about lawns . . . A good lawn is made, not born . . . Good seed, the proper fertilizer, correct watering and frequent cutting will repay you with lawn beauty . . . Crab grass was a scourge last summer and fall . . . Use a simple preventative now to stop Crab grass before it starts. Apply Crag Herbicide, Weedone, Pax or Chlordane. . . . Lawn insects are responsible for much of the poor appearance of good lawns . . . We advise an early application of Chlordane or Dieldrin.

Grass seed . . . The least expensive part of a beautiful lawn is the seed expenditure . . . Prices vary with the proportion of Blue Grass to Rye Grass . . . A pound of Blue Grass contains about two million seeds, (grass plants), a pound of Rye Grass contains only a quarter of a million seeds . . . About eight times more seed in a pound of Blue Grass . . . It goes much further and, therefore, is much less expensive in the long run . . . Don't be fooled by low prices, look at the analysis label on the boxes and check the proportion of Rye Grass . . . Cheap mixtures will contain a large proportion of Rye Grass and will assure you a poor looking unsatisfactory lawn.

Spraying . . . Why not take the easiest way to apply fertilizer or insecticide . . . The hose sprayer is nationally endorsed by manufacturers of insecticides and fertilizers as well as the outstanding garden magazines . . . The hose sprayer is simplicity itself . . . A jar for the concentrate attaches to your hose by means of a device at the top which properly proportions and mixes the concentrate with your hose water while you are watering your lawn or garden.

There is no such thing as a "Green Thumb", only wisdom to chose the proper product and apply it correctly . . . Let our experienced staff help you . . . The reliability of The I. W. Scott Company is based upon 83 years of specialization in this field . . . We are at your service.
